COURSEFOLD

VERSION 0.9 UPDATES

SCHEDULE INTERFACE

GENERAL

- Implemented side scrolling functionality via a scroll bar
- The user is now prompted when navigating away from the property list with un-updated changes
- Advanced filters can now be utilized when multiple components are selected

INSTRUCTORS

- User can now assign multiple departments to an instructor

STATUS BAR

STATUS BAR

- Fixed a bug where the status bar did not calculate enrollment correctly for sections with multiple partitions

CSV IMPORT

SCHEDULE IMPORT

- Added the ability to import corequisites, student units, and registration visibility

PDF EXPORT

INSTRUCTOR SCHEDULE EXPORT

- Added expanded options for exporting the class schedule and schedule comparison
  - Users can now filter which class sections to export, rearrange column order, toggle column visibility, and specify the section grouping and sorting.
  - Users can now modify the page layout including margins, font size, page numbers, orientation, and section enumeration
  - Added a preview bar to indicate whether the specified options will fit within the page

SCHEDULE REQUEST EXPORT

- Added a schedule request pdf export

BACK-END

BACK-END

- Rearchitected core architecture to greatly improve performance
- Implemented a natural sort order for course numbers where the course numbers would sort numerically
- Implemented native Apple Silicon processor support

BUG FIXES

- Fixed an issue where deleting a course request would not fully remove the request from the schedule request

FRONT-END

- Changed the settings menu to be bottom justified to minimize mouse movement when selecting from the menu

- Added a user setting to select the application display scale, 50% to 300%.

- Adjusted the application icon for the Mac to adhere to the Mac standard
